Education

University of Florida May 2027
B.S. Computer Science; Minor in Mathematics & Digital Arts & Science; Certificate in AI GPA: 3.97/4.0
Relevant Coursework: Data Structures and Algorithms, Intro to Machine Learning, Computer Networks, Operating Systems, Linear Algebra

Technical Skills

Programming Languages: Python, Java, TypeScript/JavaScript, Swift, C++, Go, Rust, SQL
Tools, Systems & Frameworks: React, Vue.js, React Native, Kubernetes, Docker, Terraform, AWS, Linux, Git, FFmpeg, VMAF, Grafana, Prometheus, Kibana, MySQL, OpenShift, Jenkins, Cloudflare Workers, Next.js, Node.js, Spring Boot, Express, Firebase, Supabase

Experience

Software Engineer Intern | Fifth Third Bank Aug. 2026 – Dec. 2026
- Engineering scalable, secure Spring Boot RESTful APIs using Java to support a new interactive loan assistance portal for retail clients, streamline payment plan modifications, and improve backend reliability across customer-facing workflows
- Developing a resilient, containerized microservices architecture orchestrated across OpenShift and AWS with automated Jenkins CI/CD pipelines to support reliable deployments, improve service scalability, and maintain high availability across production environments

Software Engineer Intern – Streaming Team | Cloudflare May 2026 - Aug. 2026
- Reduced infrastructure costs and achieved a **43%** improvement in ML-driven visual VMAF scores by building a Rust and Go comparison tool with custom FFmpeg C-bindings to deliver higher resolution video at lower bitrates
- Prevented viewer-facing video defects across **100,000+** daily segments and cut encode validation latency by **38%** by engineering event-driven Cloudflare Workers and R2 telemetry pipelines provisioned via Terraform across **335** edge locations
- Optimized the video-on-demand download feature, reducing CPU usage by **99.9%** and peak memory by **92.5%** by architecting a zero-encode pipeline utilizing FFmpeg to package existing high-quality playback segments into MP4s, safely bypassing redundant source encoding
- Decreased average video download generation time by **83%** and internal data bandwidth by **57%** to drastically reduce core compute utilization by reusing pre-encoded edge segments while seamlessly preserving the existing customer API

Teaching Assistant – Intro to SWE | University of Florida Jan. 2026 – Present
- Mentored **35** students across **7** project teams on Git workflows, testing strategies, and scalable system design
- Cut debugging time by **60%** per cycle by guiding teams on architecture and optimization through **30+** full-stack application reviews
- Drove a **100%** on-time completion rate across **14**-week Agile cycles by enforcing code review standards and PR workflows

Webmaster | Society of Asian Scientists and Engineers (SASE) Jun. 2025 – Jun. 2026
- Secured **18** sponsors, raised **$4,000+**, and hosted **143+** hackers by leading the first SASE hackathon and coordinating **5** committees
- Directed a **66**-person dev team to build and maintain ufsase.com and semester-long tech-for-good projects, managing agile sprints and GitHub PR reviews across **3** repositories
- Reached **60+** members per session by organizing workshops on API integration, full-stack development, and industry best practices

Software Engineer Intern | CACI International Inc. May 2025 – Aug. 2025
- Increased API speed by **2x** and cut load times by **40%** by refactoring a Java, Spring Boot + Vue.js monolith into **8+** microservices
- Improved issue resolution and failure diagnosis speed by **60%** while reducing manual system checks by **30%** through integrating Grafana dashboards for proactive monitoring and real-time log visualization
- Reduced satellite antenna operator workload by **75%** across **20+** antennas by deploying a Dockerized command-and-control app with live dashboards, angle calculations, and real-time logs

Full-Stack Developer | Elite Nails & Spa Jun. 2024 – Jan. 2025
- Reduced double-bookings by **85%** by developing a booking system supporting **6,000+** active users and **5,000+** appointments
- Boosted repeat client visits by **30%** and achieved **97%** customer satisfaction by architecting a responsive website integrating Firebase for real-time updates and personalized automated notifications

Web Developer | Freelance Jun. 2018 – Jan. 2025
- Reached **8M+** users on a comic platform built and scaled using React and Node.js with full-stack modern tooling
- Increased engagement by **150%** by leading a **15**-person cross-functional team to ship user-facing features, leveraging SEO and targeted outreach

Projects

Dear Diary | RAG, React, Node.js, Gemini API, Google Cloud, ElevenLabs, MongoDB, Supabase Feb. 2026
- Won **Best AI** & **Best ElevenLabs** (WiNGHacks **2026**) for a React/Node app detecting emotional manipulation patterns
- Generated emotion-aware audio responses from **99.9%** of past entries by engineering a Semantic RAG architecture using Gemini 2.5 Flash and MongoDB Vector Search with **768**-dimensional embeddings

Leadership

External Vice President | UF Quant Club Aug. 2026 – Present
- Secured **$3,500+** in sponsorships from leading quant firms like Jane Street, HRT, and SIG through targeted corporate outreach
- Grew membership by **150%** to **100+** members and **600+** Discord students by hosting career fairs, market making games, and quant workshops
- Connected **100+** members to top quant firms, with alumni placing at Jump Trading, HRT, Susquehanna, Belvedere, DRW, and Voloridge
